

# The need for a good road

Your car can go forward, backwards and turn. That's great. But where are you going to drive without a road ?

**1** We are going to use your drawing skills on this one.

Click on the stage (that's the white icon down at the bottom right next to your car)

Click on backgrounds in the top middle and then on the Paint button just below it

In the editor that opens up - we are going to draw a road (from above)

The first step is to pick the paint can

This allows us to fill in areas in a colour.

I have picked a rough brown colour to show the mud off the road and filled in the full screen.

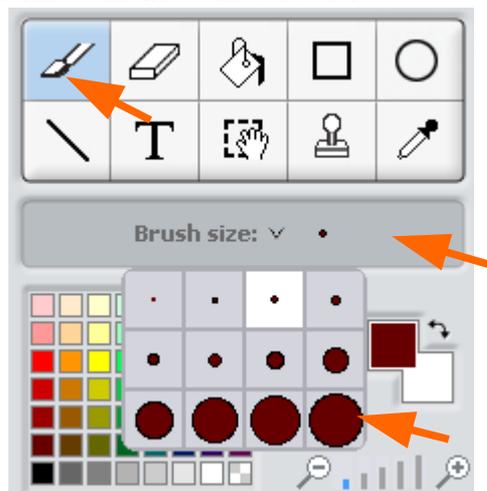

Now pick the brush

and select a big brush size

(go for the biggest)

and finally pick the colour

black

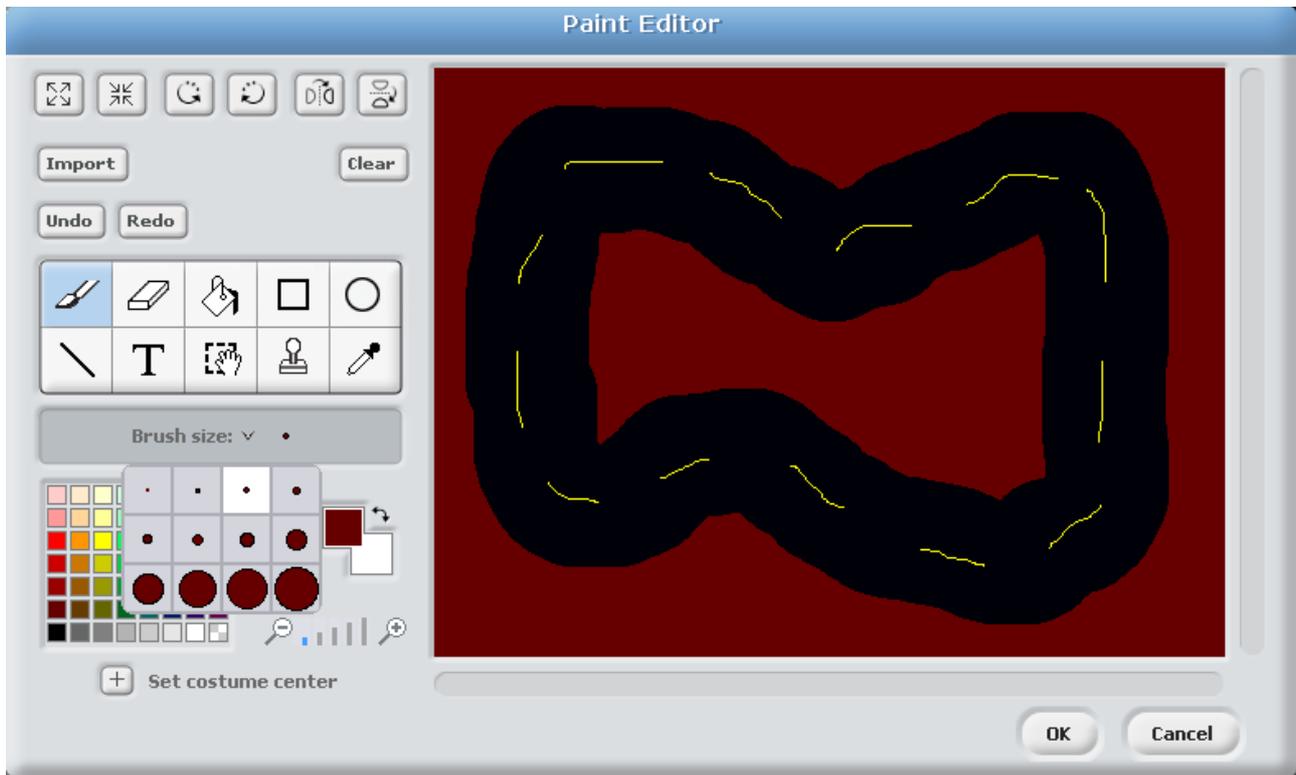

Draw a road with the big black blob.

Try to keep away from the edges so the background colour is on all sides.

I then picked the thin brush and changed to a yellow colour to draw some lines.

Here is my amazing masterpiece. Can you do better ?

When you are finished press 'OK'

Are you ready to drive round your track yet ?

Remember as well as LEFT and RIGHT keys, you also use UP and DOWN to go faster or stop (and you can even reverse if you hold down the DOWN key).
